

Month Sums

Tiffany Winter

2/3/2022

Figure 1: The log of the monthly sum of *Alexandrium* (cells/l) at the UNH Pier (New Castle, NH) sampling site. The months run from January (J) to December (D).

Figure 2: The log of the monthly sum of large ($\geq 3\mu\text{m}$) *Pseudo-nitzschia* (cells/l) at the UNH Pier (New Castle, NH) sampling site. The months run from January (J) to December (D).

Figure 3: The log of the monthly sum of small ($< 3\mu\text{m}$) *Pseudo-nitzschia* (cells/l) at the UNH Pier (New Castle, NH) sampling site. The months run from January (J) to December (D).

Figure 4: The log of the monthly sum of *Alexandrium* (cells/l) at the HHHR2 (Hampton, NH) sampling site. The months run from January (J) to December (D).

Figure 5: The log of the monthly sum of large ($\geq 3\mu\text{m}$) *Pseudo-nitzschia* (cells/l) at the HHHR2 (Hampton, NH) sampling site. The months run from January (J) to December (D).

Figure 6: The log of the monthly sum of small (< 3μm) *Pseudo-nitzschia* (cells/l) at the HHHR2 (Hampton, NH) sampling site. The months run from January (J) to December (D).
